CGI

Experience the commitment®

CGI is a global end-to-end IT and business process services leader

High-end business
and IT consulting

72,000 professionals,
85% shareholders *

10,000 clients across
the globe

System integration, IT
and business process
outsourcing

400 offices,
40 countries around
the world

Client satisfaction:
9.1/10

100+ mission-critical
IP-based solutions

\$10.4B annualized
revenue

World's 5th largest independent IT and BPS firm

* Before Logica

CGI

A strong local presence around the world

With over 650
oil and gas
clients
worldwide.

Information Management for Production

Provide immediate access to critical asset performance data

**Integrated production
forecasting &
planning solutions**

**Hydrocarbon field
planning**

**Specialist production
applications**

**CGI (PAS) Production
Revenue & Accounting
System**

**Process control
(accelerators)**

**Joint venture
management**

**Heavy oil
operations (HVO)**

**Production volume
reporting (PVR)**

**Analysis and
surveillance**

**Gas facility
solutions (GFS)**

**Contract
nomination (CNS)**

**Operational
improvement and
compliance**

Is your data available in a single searchable format? Can you use data to analyse production? Do you understand all of the associated outcomes, behaviours and commitments?

Making production data available for analysis and surveillance is an industry challenge..

The internet, network and communication solutions available today have revolutionised data availability:

- Huge volumes of data gathered from multiple distributed data sources,
- real-time data, near real-time data and static data are all required for different purposes
- Data is not all held in the same format (paper, microfiche, electronic), system, network, organisation or geography,
- New data types and formats are appearing all the time,
- It continues to be unclear which of these formats are or will be the most valuable to our industry over time,
- Information requirements continue to evolve as new patterns emerge that need to be addressed

Fundamentally Oil & Gas companies need to derive value from information to make Better, Faster and Smarter business decisions

Some CGI innovations...

1. Joint Venture Management: operators need to equip multiple functions and individual roles with production information and each of these requires different information sets derived from multiple data sources, ***it is an industry initiative***,
2. Field Data Management: manual spread-sheets or home-grown databases no longer fit the bill. Now ***field data capture and*** production volume reporting solutions are expected to access production data through the use of a data extraction layer eliminating direct calls to the back-end database, ***accelerating steam insight***
3. ***Refining data for analysis and surveillance***: CGI's Insight concept takes information from different sources - both structured and unstructured data, handles external available data sets, extracts information from real time systems, thus enabling the correlation of patterns in data.

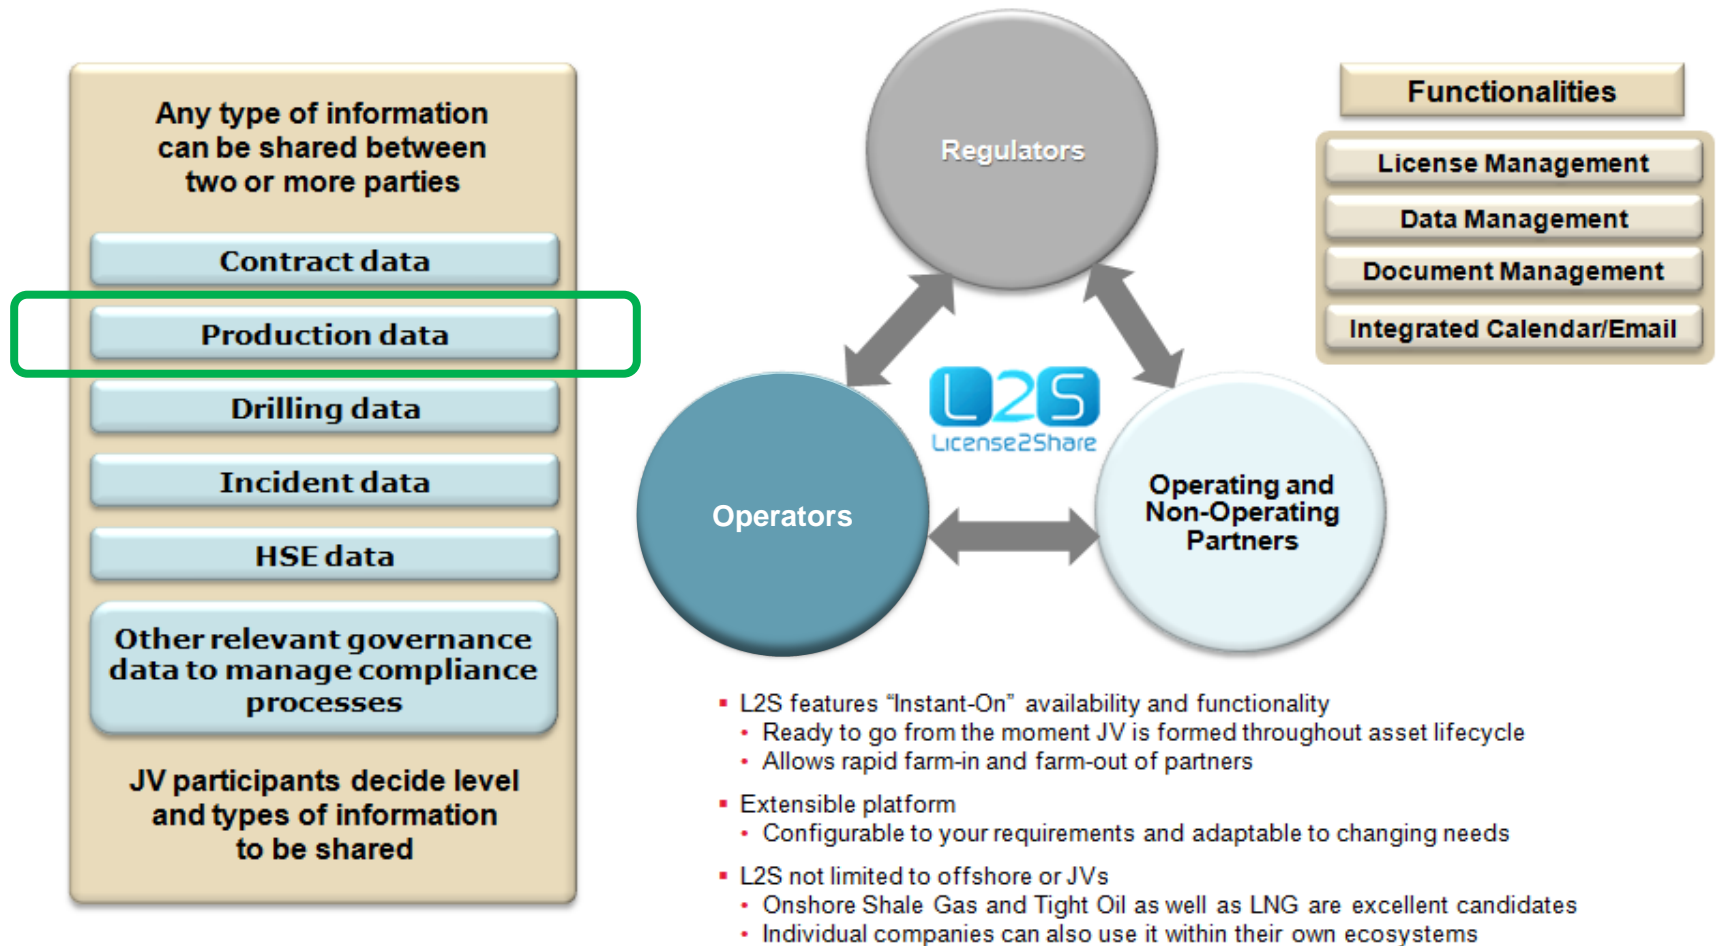

1. “An Industry Initiative”

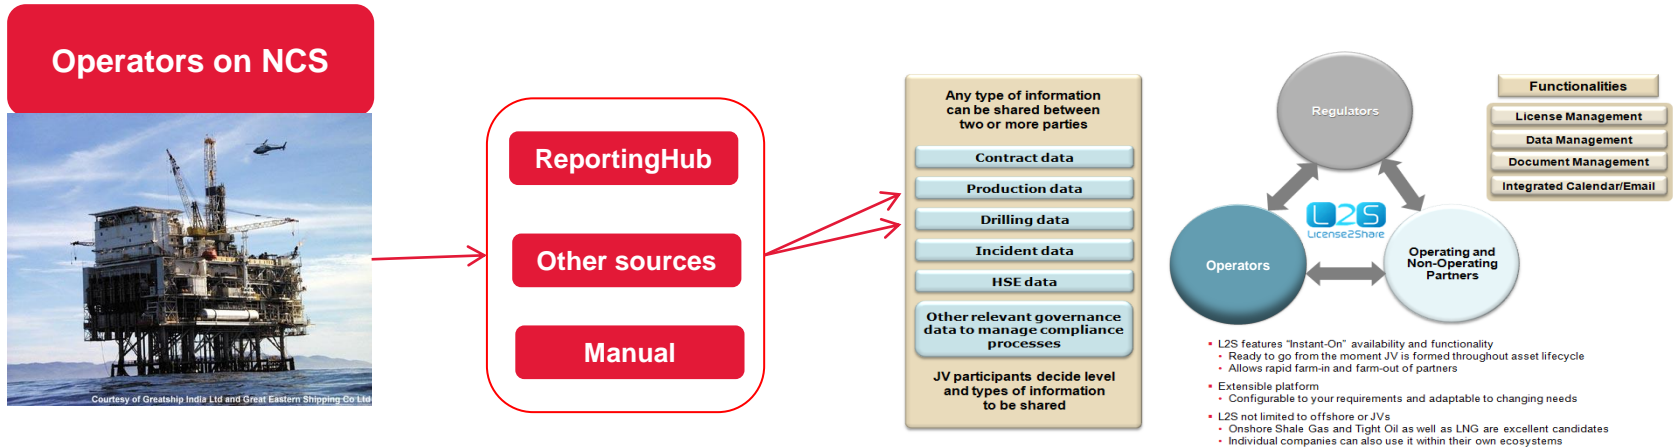

- A non profit administrative arrangement organised as a membership association constituted Nov. 2007 (legal entity)
- «Owned» by 38 operating companies represented on NCS, most of them global E&P players.
- Main objective is to deliver IT solutions for supporting common processes in JV management and Operator / Authorities communication / reporting.
- Approx. 80 companies use the services delivered by EPIM.
- EPIM currently have 7 common services included in its portfolio, with new services being added continuously
- EPIM is a good sample of an efficient approach towards managing common processes / solutions without compromising the competitive environment between the JV members

Delivering what is important to operators

Production Data in License2Share

Content

- Daily Production Reports
- Daily Drilling Reports
- Monthly Production Reports

Advantages

- Archived during live cycle of Joint Venture (> 10 years), findability
- Secured reporting area for partners and authorities, audit trail
- Supports M&A, Divestments : DataRoom
- Manages governance around production reporting

Examples other Content

- Project Information
- Drawings
- HSE
- Financials
- Contracting

2. Field data capture

EFFICIENTLY COLLECT, COMPILE, REPORT AND STORE FIELD DATA

- Both **field operators and office personnel need their own data sets** in intuitive, comprehensive, easy-to-access and easy-to-use tools and processes.
- We recognise that it's about **improving data transparency, data integration and data quality** across the entire value chain for production. This means gathering data from many hundreds of wells, subsequent calculations and understanding the data
- Do you **understand what your are measuring** and why?

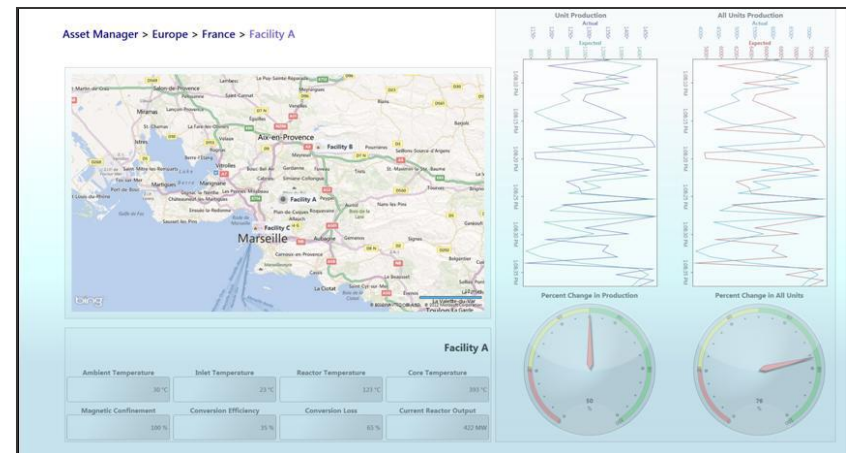

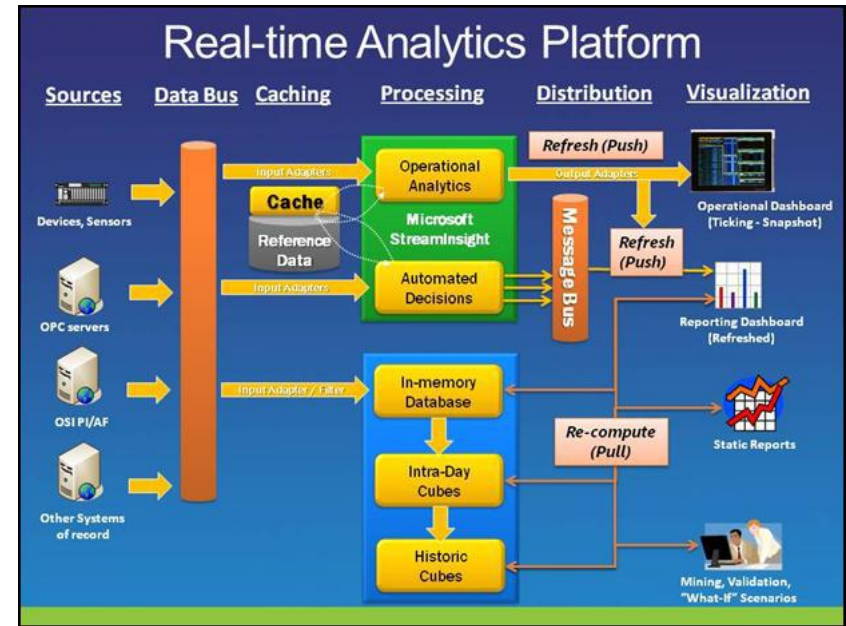

A strong alliance and eco-system:

CGI Accelerators

Monitoring software for manufacturing processes in the Process Control Domain:

- CGI designed ACCELERATORS that enhance MICROSOFT STREAMINSIGHT and help operators realise the benefits of Real-Time Business Intelligence (RTBI).
- It is an application framework with its own set of adapters and event driven architecture enabling highly efficient management regardless of data source, relationship or destination.
- Small yet powerful footprint allows placement in field as well as central locations

3. Refining data for analysis and surveillance

A suite of solutions for today's data challenges

What is CGI Insight Foundation?

“A flexible, extensible system for the aggregation of disparate data sources, into a singular searchable or discoverable format.”

Data Harvesting

- Comprising a powerful and flexible toolset
- Scalable and customizable

A tool for dealing with large, complex data

- Acquiring **massively different** raw data sets
- Normalising data **without loss of accuracy or detail**
- Fast, efficient & fielded **searching**
- **Retains detail even if original is subsequently deleted**
- **Low impact data spidering** – addressing ‘Denial Of Service issues

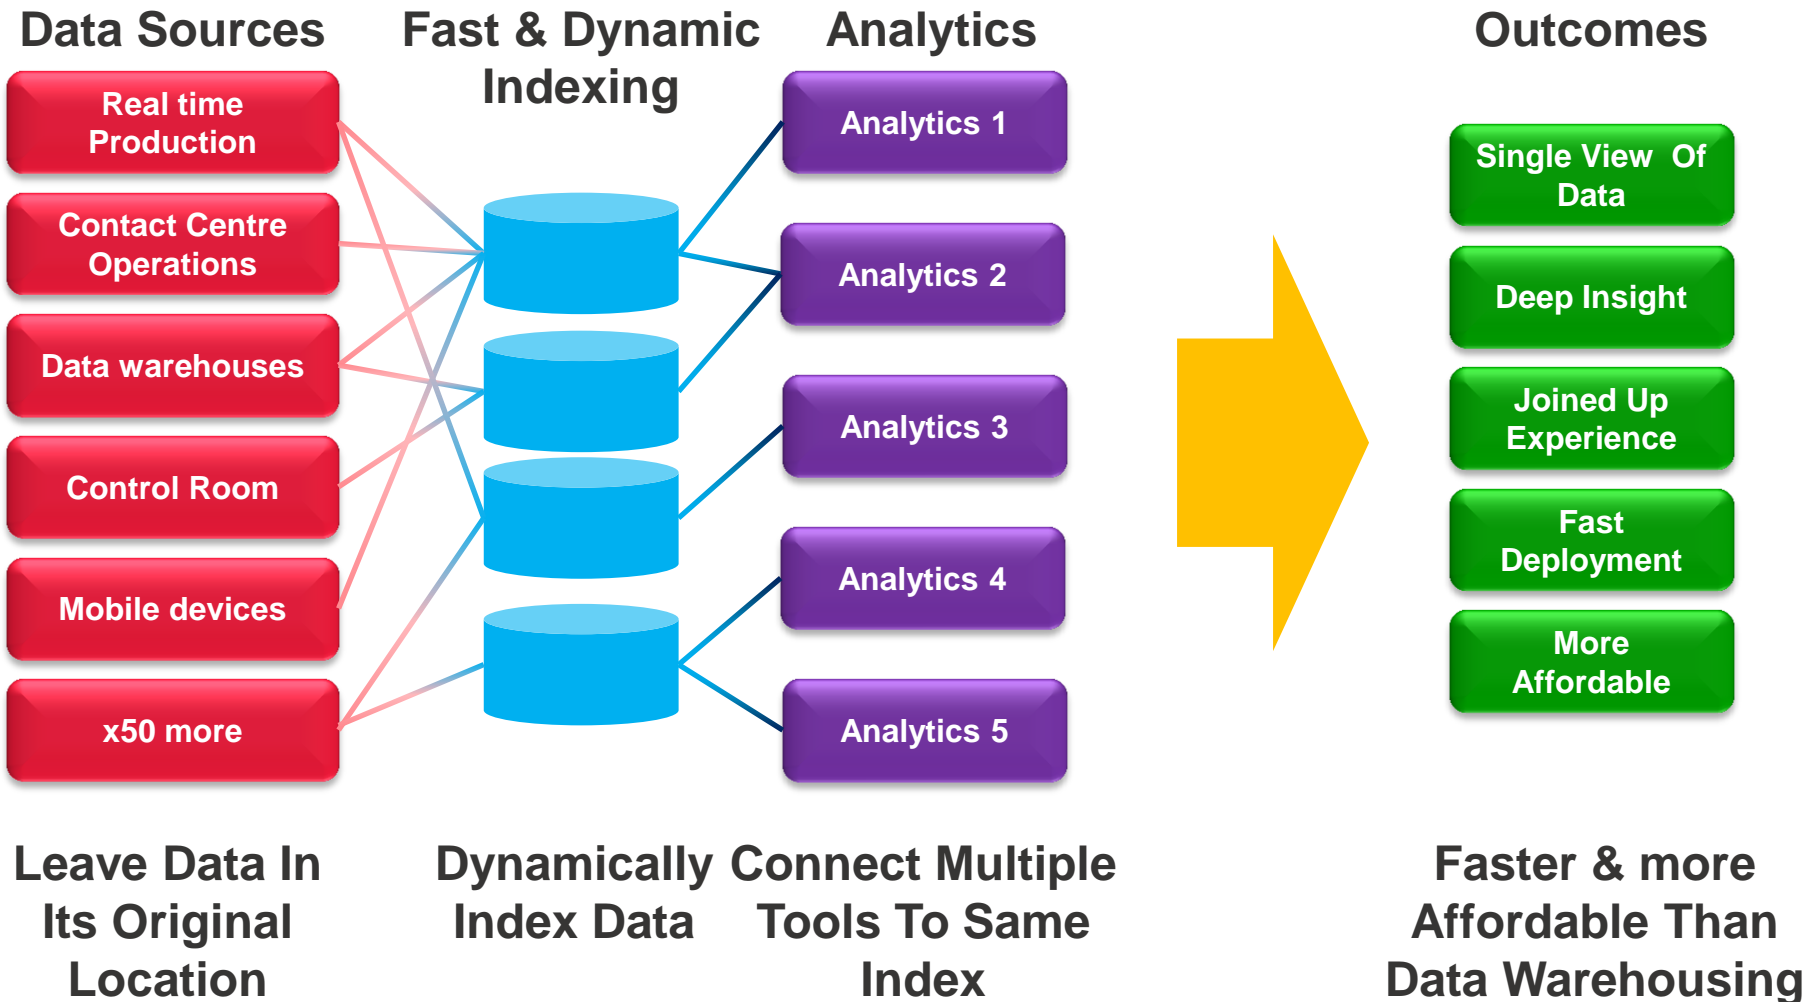

CGI Insight Foundation Overview

- **Insight's** collectors are directed at data sources, passing captured data to a series of **translators** for the processing of specific data types

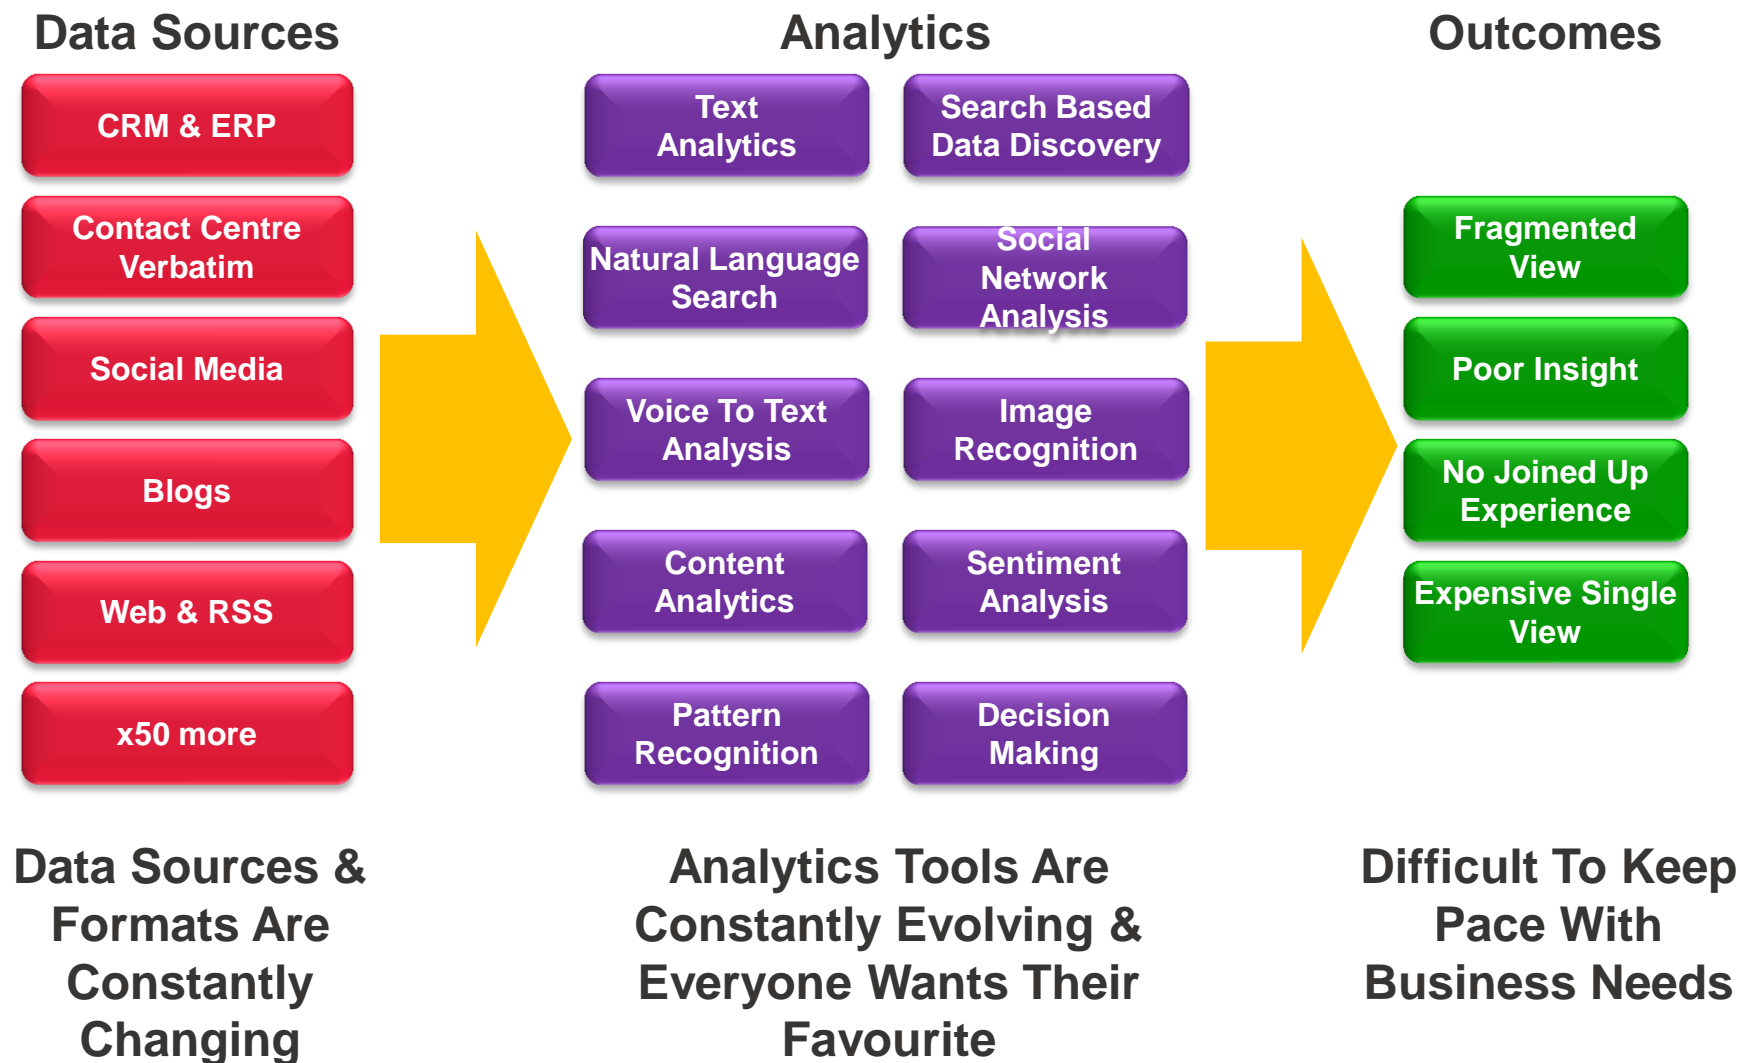

- Translators create **indexable** data items that retain **key information** within the data, respective to data type
- Output is in a **single searchable or discoverable format**

CGI Insight allows dynamic data aggregation

Why 'Warehouse' When Data Is Dynamic

***Fundamentally Oil & Gas
companies need to derive value
from information to make Better,
Faster and Smarter business
decisions***
